

**MacServerIP 9.0** is an advanced Apple file sharing system that replaces services for Macintosh (SFM) on Microsoft Windows servers and workstations. The new rock solid system solves many SMB and SFM networking as well as filesharing problems, reduces workflow bottlenecks, eases administration responsibilities, and allows PC based IT departments to better co-exist with Mac dominated graphics departments. MacServer IP is guaranteed to speed up and optimise file sharing between Windows Servers, MacOSX and MacOS9 clients.

- **new:** AFP 3.1 support
- **new:** Full support for TIGER MacOSX 10.4
- **new:** Kerberos support for single sign on pass through authentication in 'Active Directory'
- **new:** Unlimited login password lengths
- **new:** Support for file names longer than 31 characters and support of 'V\*?<>|' in file and folder names
- **new:** Unicode support
- **new:** DHX password encryption support
- **new:** On a cluster failover volumes are immediately available
- **new:** Very fast file searching via our new MSIP framework
- **new:** High performance MacOSX file access on Windows servers
- **new:** Bonjour (Rendezvous) support
- **new:** reduced memory consumption when sharing millions of files
- **new:** Supporting full compatibility between MacOS Classic and MacOSX files unlike Mac SMB client
- No hidden files or resource forks to lose, as with SMB
- Improved stability of Windows based servers in Mac dominated environments
- Enhanced Gigabit network performance
- Unlimited file and volume sizing (no 2GB file size limitations)
- **5 x faster than SFM and voted the fastest IP based Mac sharing system on the Windows platform**

## Testimonials

'The support we get for MacServerIP has been very good and the teams at Cyan and Targetcolour have been responsive to our group requirements. After extensive testing all group participants decided that MacServerIP was the best performing system and a clear choice for our Windows – Mac Servers'  
Michael Puddington, Landor London (Part of the WPP Group)

'After experiencing several problems using Services for Macintosh on our new Windows 2003 server we decided, on recommendation, to try the CYAN MacServerIP solution. Since that first trial installation we have bought two more simply because the solution was so easy to use, trouble free, and very fast on the network.'  
Chris Bunnett, The Art Group London

'MacServerIP has really sped up our production environment! The new functionality with MacOSX and long filenames really improved our workflow and the speed enhancements to our RIP 'Hot Folders' have really made a positive impact on our manufacturing figures.'  
Graham Preston, Imageco
